

Apo Dynamics Comparison (Supporting Context)

LITERATURE ASSUMPTION

"R702W is destabilized"
(literature term)

Expected: HIGH conformational
heterogeneity in mutant

THIS STUDY (Apo MD)

R702W shows REDUCED
conformational sampling

WT: 12.6% frames $>5\text{\AA}$
R702W: 0% frames $>5\text{\AA}$

*Supporting context for
mutation-sensitive binding*
