

Literature Assumption

R702W is "destabilized"

(literature term)

→ Expected: HIGH conformational
heterogeneity in R702W

This Study (Apo MD)

**R702W shows REDUCED
conformational sampling**

WT: 12.6% frames >5Å

R702W: 0% frames >5Å

Apo MD shows reduced conformational sampling in R702W, consistent with mutation-sensitive binding observed in FEP
